

Problem

- - Lack of efficient and sustainable transportation options
- - Traffic congestion
- - Air pollution
- - Limited access to affordable transportation
- - Impact on quality of life in urban areas

Product Objectives

- Real-time public transportation information for efficient urban travel.
- Seamless multimodal trip planning for sustainable transportation choices.
- Promoting shared mobility for sustainable transportation and reduced congestion.
- Facilitating electric vehicle usage with real-time charging station information.
- Leveraging user feedback for data-driven transportation optimization and infrastructure planning.

Impact

- Reduced traffic congestion
- Lowered carbon emissions
- Improved air quality
- Enhanced transportation efficiency
- Promoted sustainable travel modes
- Empowered users with real-time information
- Convenient trip planning options
- Increased accessibility
- Improved convenience
- Environmental friendliness
